ROYAL
DENTAL GROUP

BETTER ERGONOMICS, SUPERIOR DENTISTRY

The Royal Alliant chair is designed for the ultimate comfort of both your staff and patients. The thin, contoured back with the magnetic headrest enables you to comfortably work closer to the patient and position the oral cavity to easily see and access all quadrants.

Designed to help you perform at your best

SEE MORE WITHOUT STRAIN

The Royal Alliant chair has a unique low profile and gives you a versatile range of positioning for maximum patient and doctor comfort. The magnetic headrest pillow allows you to position the patient to easily see all areas of the oral cavity while you maintain a healthy posture. The Alliant chair provides the option of two different backs to better fit you to your patients.

The reliable standard in pinch valve technology

The Proma Alliant delivery unit is elegant in its simplicity and unrivaled for dependability. Proma invented pinch valve technology for controlling the flow of water and air to the handpiece. The new Proma piston valve is backed by a lifetime warranty.

SIMPLE, PRECISE AND EXPANDABLE

The Prima Alliant delivery unit's intuitive design gives you exceptionally precise and responsive control of water flow to the handpiece. The unit's cast aluminum frame includes the capacity to integrate additional devices in the future.

Superior design for easy operation and consistent results

The Proma Alliant unit gives you the capacity to add new devices such as fiber optics, piezoelectric scalers, curing lights, electric handpieces, intra-oral cameras and more.

The Proma Alliant multi-function touch pad provides precision controls for the chair, cuspidor bowl flush and cup filler. Controls located under each handpiece position enable precise metering of water flow to the bur.

Touch Pad Control on both arm rests allows doctor or assistant to adjust the patient's positioning.

OPTIMAL EFFICIENCY AND PRECISION CRAFTSMANSHIP

The Proma Alliant unit provides a flexible platform to support the modern dental office of today, while enabling you to integrate future dental technologies as they become available. Flexibility and forward-thinking are hallmarks of the Proma brand.

FLEXIBLE, ASEPTIC PERFORMANCE

The Proma Alliant Model A6310 Delivery System and A6720 Cuspidor provide efficient aseptic functionality. The cup filler and timed bowl rinse are easily controlled by a touch pad and also by buttons on the assistant's side of the unit.

Proma offers a variety of cabinet-mounted units. The versatile A5560 unit shown here provides an assistant's delivery for a 12 o'clock cabinet. It is also available in the A6550 dual delivery system for both a doctor and an assistant.

The Proma A6410 North Compass unit is an efficient right/left hygiene solution that provides outstanding value in a versatile delivery system.

Proma delivers the perfect solution for your practice

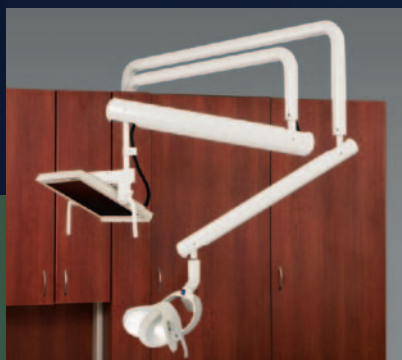

EFFICIENCY AND VALUE

Proma offers a wide variety of delivery systems, including this doctor's cabinet side delivery unit that conveniently stores out of the way when not in use.

Versatile Proma lighting options for the operatory

Proma Xenon Quartz-Halogen Light

Both Proma LED and Xenon Quartz Halogen lights produce a pure, bright pattern at the ideal color temperature of 5,000K; and both are available with the full range of mounting options to fit your operatory design – chair, wall, ceiling, cabinet or track.

The Proma low-voltage, medical-grade, track-light-mounted monitor is the ultimate platform for patient education and entertainment.

Proma LED Light

COOL, EFFICIENT, SILENT

The Proma LED Operatory Light incorporates the safest, most beneficial application of LED for dentistry — indirect, reflected light. The efficient LEDs stay cool and require no fan, resulting in absolutely silent operation.

Infinite, precise intensity adjustment from 3,000 to 35,000 LUX is controlled by a single touch lever.

Existing Proma 5100 A-Series lights can be converted to Proma LED with the simple upgrade install kit.

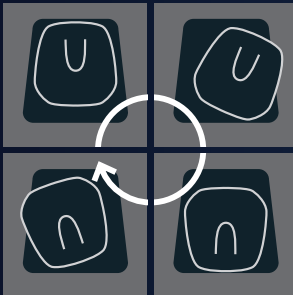

The magnetic pillow comfortably cradles the patient's head and enables you to easily rotate the pillow to see all quadrants of the oral cavity while you maintain a comfortable posture.

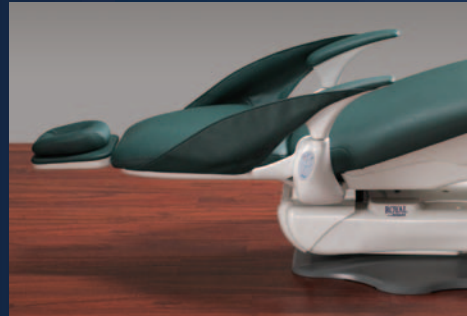

The Alliant double articulating headrest is extremely versatile for positioning the oral cavity of elderly or disabled patients.

The double articulating magnetic headrest provides maximum versatility. In addition to the double articulation feature, the magnetic pillow allows for greater rotation of the oral cavity.

The Alliant chair has an ultra-low 13 1/2-inch seat height to safely and conveniently accommodate all sizes of patients and operators.
