## Biotec Treatment Centers: Smart technology and design for maximum efficiency

Sliding monitor mount provides complete flexibility for viewing digital x-rays and patient records.

The flex arm work surface and delivery system enable complete right-handed to left-handed changeover in minutes.

Appliance and storage drawers have full-extension, high-quality ball-bearing drawer slides for easy access and long life.

Built-in Porter Instrument nitrous flowmeters are among the options with all Biotec cabinets.

Flexible options for storing a computer CPU make the most of your valuable storage space.

### QUALITY, STYLE AND VALUE

Biotec cabinets are designed to optimize your workflow by keeping instruments and materials organized and easily accessible. They minimize effort, help prevent strain and fatigue, and support your mission to deliver outstanding patient care. Biotec cabinets are built to an exacting standard of craftsmanship and offer a variety of custom features to create the perfect fit for your practice.

## A distinctive environment for your patients and staff

Biotec makes a variety of 12 o'clock treatment centers to support every type of dental delivery system. Stylish design and quality workmanship reflect your professional standards and enhance the confidence and comfort of your patients.

The optional finished back of the treatment centers with matching sub-bases replaces traditional walls and gives your office an attractive and distinctive open design.

## Biotec Central Work Stations: Refreshing open design and efficient workflow

Pass-through feature enables x-rays to be shared between two operatories.

Offset rear panel gives your assistant fast, easy access to devices such as impression material dispensers.

Lower cabinets enable convenient CPU storage.

Convenient side cabinet places appliances at your assistant's side.

### DESIGNED TO KEEP YOUR PRACTICE MOVING

Biotec Central Work Stations optimize your workflow by enabling more efficient organization, easier access and expedient delivery of instruments and materials. The highest quality components and workmanship ensure a distinctive appearance and lasting performance.

The wrapped trays and cassettes are placed in the sterilizer for final processing.

Once the sterilization cycle is complete, the sterile trays and cassettes are stored in the Blue Zone to be returned to the operatories.

# The Biotec Instrument Processing Center: Streamlined for efficiency and safety

Contaminated trays and cassettes are brought to the Red Zone for disassembly, disinfectant soaking, and cleaning.

Cassettes and instruments go to the ultrasonic cleaner, then on to the pull-out work surface for wrapping.

The Biotec ultrasonic shelf is a covered Gibraltar work surface that provides spill containment that can occur during instrument cleaning.

Biohazard and waste materials are disposed of in the pullout disposal drawer.

## The Biotec Contractor Series: Economy without compromise

If you are looking for a basic cabinetry solution that is price-competitive with local cabinet builders, the Contractor Series is the answer. The important difference is that these cabinets are specifically designed for a professional dental practice, and have the same high quality drawer slides, hinges, sub-bases, and high-pressure laminate counter tops as our best line of cabinets. The more economical price is achieved by omitting premium features that you may not need. You have the option to add specific features that your practice requires.

## A quality selection of Biotec Side Support Cabinets

Side Support Cabinets provide a variety of convenient options for doctors and assistants. They can contain sinks, foot-controlled faucets, soap dispensers, trash drops, sharps disposal, storage for materials, dental delivery systems and auxiliary equipment.

Wall-hung cabinets are available for towel, cup, and glove dispensers as well as for additional storage.
